
Labassing

User Guide

Rodrigo Juez and José Manuel Freire

INTRODUCTION

We created a website to choose the pair and the lab group for EDAT at the Universidad Autónoma de Madrid. In this application you can create and remove pairs, convalidate the subject from past years, and choose a lab group depending on your theory group.

HOME PAGE

In the home page is where all the action happens. When we are not logged in, the only option you have is to log in. On the right you can see the things you can do in the app and in the footer you have the authors.

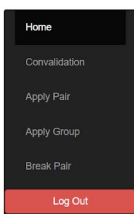

Log In

Here you can:

1. Login
2. Apply for convalidation if appropriate
3. Select partner
4. Select group

Jose Manuel Freire Porras(jose.freire@estudiante.uam.es)
Rodrigo Juez Hernández (rodrigo.juezh@estudiante.uam.es)

Once we log in we have access to a menu to the left where we can perform the actions that will be described in the next parts of this user guide. Now in the main part of the page we can see our name, our theory group and more information about our profile, as the pairs, selected groups and if we are convalidated.

Summary page for **Alejandro Almarza Marques**, (your theory group is 129)

Convalidation

Your lab assignments have NOT been convalidated.
(If you wish to request a convalidation press the "convalidation" button.)

Pairs

This pair is in process of validation:

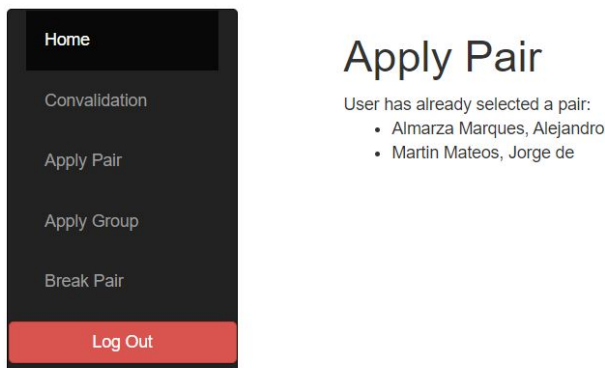

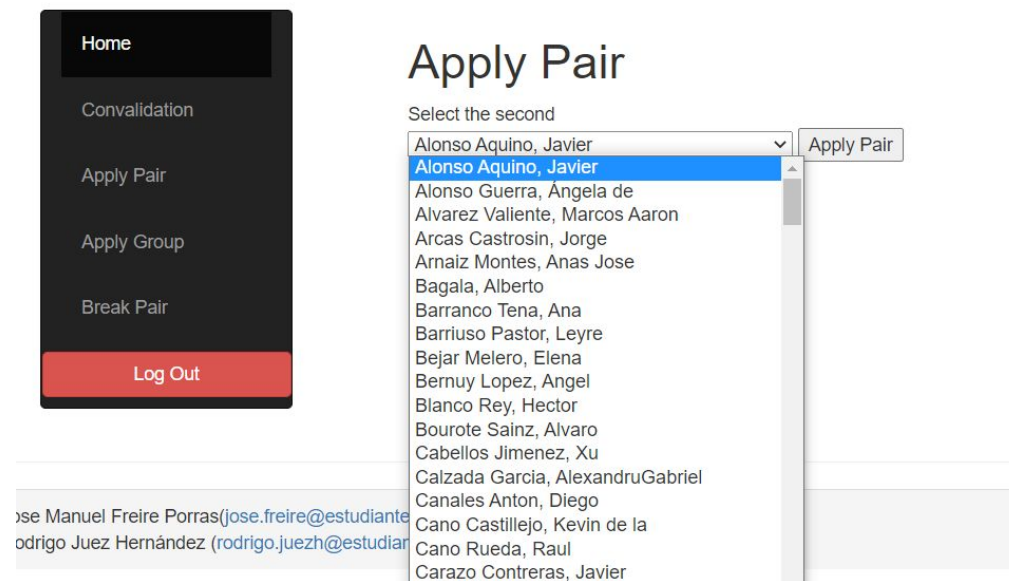

- Almarza Marques, Alejandro
- Martin Mateos, Jorge de

Selected Group

You aren't a member of a lab group

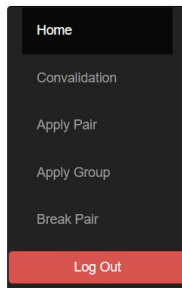

APPLY PAIR

In the apply pair tab you can choose from a list with all the eligible people from the course to form a pair with them. Once you have chosen a classmate, you will have an unvalidated pair. To validate the pair, both have to choose each other from the list, and only then, the pair will be validated. Only one pair can be selected per student, so once one has been created, you cannot make a new pair without breaking the previous one.

BREAK PAIR

In case you gave it a second thought and you wanted to change your pair, you can come to the break pair tab, where you have the option to break the pair you are already in. This can be useful to change your pair or convalidate the subject. In case your pair has already been validated, you will need both members to click on break pair to actually break it.

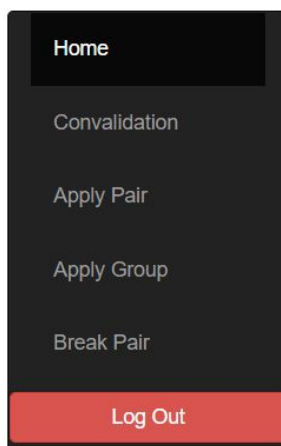

Break Pair

Select the pair to be broken:

student1 ---> Alejandro Almarza Marques student2 ---> Jorge de Martin Mateos Validated: False

APPLY GROUP

Once your pair is done, you have to select a group for the lab classes. In order to do this, you can go to the apply group tab, where a list with all the available groups for you will display, and where you can pick one and then click on the “Apply Group” button to join. Take into account that you can only join a lab group that is compatible with your theory class group.

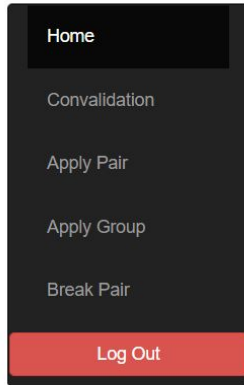

Apply Group

Select the group you want to join to

1291 (0/23)
1291 (0/23)

CONVALIDATION

In the convalidation tab you can opt to convalidate your subject if you fulfill the required scores. This means you would not have to do the practices this year. You need to have at least a 7.0 in both theory and labs from last year. In case you have a pair, you cannot convalidate the subject, so make sure not to choose one or to break it if you already chose one, otherwise, the page will not let you.

Convalidation

Your grades are **9.0** in theory and **10.0** in lab

Congratulations! You satisfy requirements.
